

Common stacks for web

LECTURE
SUMMARY

PRE-PROGRAMMING

Covered in this lecture:

More examples of stacks

- ▶ Any web stack has 4 components: operating system, server system, database, back-end language
- ▶ LAMP is the oldest and most popular stack
- ▶ When you have different needs for your technology, you can use other stacks
- WINS = Windows Server, IIS Server, .NET, Microsoft SQL Server
- ▶ WINS is great for big enterprises, because it focuses on security and IP protection
- ▶ It's also very slow to use, expensive, and you have to train people on how to use it
- MEAN = MongoDB, Express.js, Angular.js, Node.js
- ▶ MEAN is great for small startups that need cutting edge technology, speed, and a polished user interface

See you next lecture!
